Cloud Backup Solution

Taking Control of your data with Cloud Backups

A cloud backup tool is a Disaster recovery tool that, like all other disaster recovery tools, is somewhat new to the small-to-medium-sized-business (SMB) market. Though disaster recovery has been a priority for virtually every business with a dependence on computer systems since its inception in the late 1970's, the high cost meant that it was only available to the Fortune 500's of the world.

The rest of us had to make do with what we could afford, which wasn't much.

Luckily, nowadays Enterprise-grade Disaster Recovery is only "enterprise-grade" in name, not because it has dropped in quality or scale (quite the contrary), but because advances in internet connectivity, networking equipment, processing power, and the rise of cloud computing have given birth to Disaster-recovery-as-a-service (DRaaS), making enterprise-grade Disaster Recovery affordable for businesses of all shapes and sizes.

The most common and most affordable DRaaS tool for SMBs today is a cloud backup solution.

How does it work?

The way it works is simple; every few minutes an image of your server is captured, encrypted, and replicated onto another secure server offsite.

With such a solution in place, you can rest assured that your data, sales, client info, bills, files, emails, and everything else on your database is safe, secure, and accessible.

Corp IT Group

What's included?

First and foremost, Security is the cornerstone of the services included in this plan. Our solution is fully encrypted, kept behind physical and virtual firewalls, and meets all compliance requirements, whether they be from SOX, HIPAA, PCI, FISMA, or GLBA.

What else is included?

Unbeatable Security

Ensuring that no one but you can ever access your data is a top priority to us, every packet of information is encrypted end-to-end and stored in a fully secured, compliance ready datacenter.

Email Backup

Ongoing backup, storage, and restoration of your Exchange files.

Fast Restoration

Files are available the moment you need them.

Retention and Archiving

Top of the line digital archiving solution. You can rest assured that it meets all of your compliance requirements.

Block Level Backup

Once a file has been saved successfully, our software only backs up changes, down to the block level, ensuring that such a robust service is not eating away at bandwidth and slowing down your internet speed.
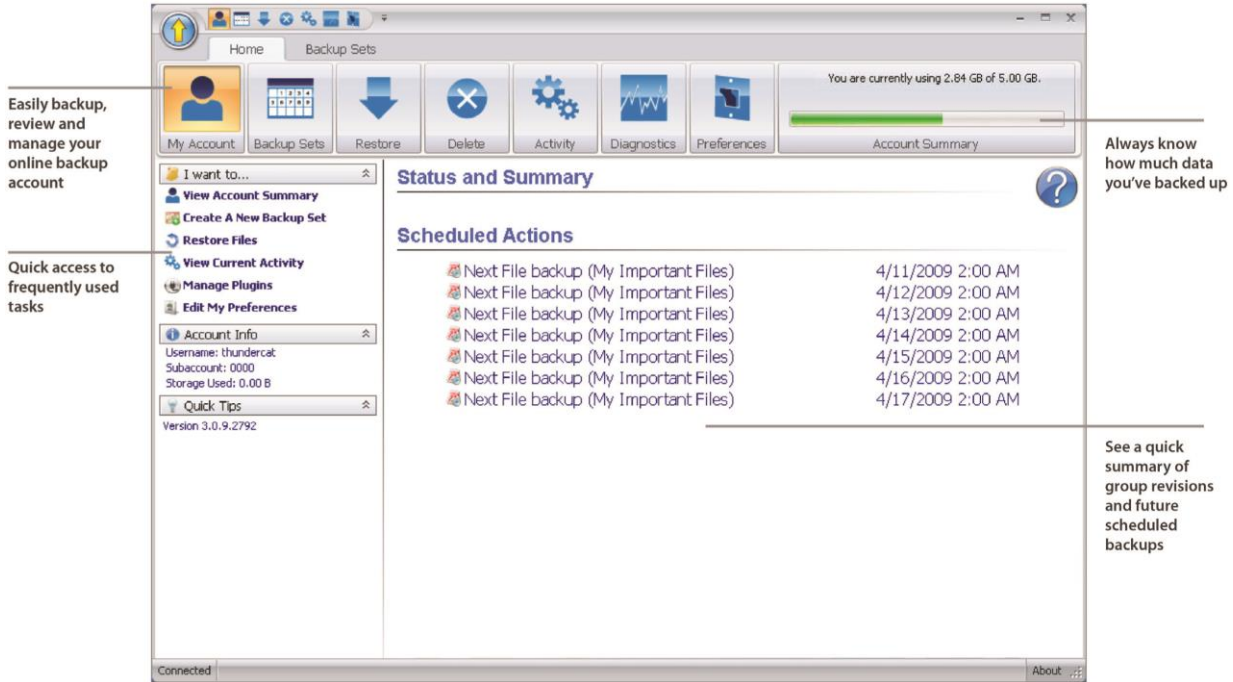

Flexible Archiving

Welcome to complete scheduling flexibility. Each backup can be set to run at any user-defined time, on any user-defined frequency. There are default settings, of course, but every aspect of the scheduler is easily configurable.
